IN THE CLAIMS:

Please amend the Claims as follows:

1. (Original) A device for pivoting a vehicle door or a vehicle lid, which is connected in a rotationally fixed manner to a hinge bracket (1), about a hinge pin (3), having the following features:

a) the device (5) comprises a drive (6) and a drive shaft (7) which is connected to the drive (6) and extends in the direction of the hinge pin (3);

b) the drive shaft (7) is connected in a rotationally fixed manner to the first end (8) of a bracket-like drive lever (9) arranged essentially parallel to the hinge bracket (1);

c) the second end (10) of the bracket-like drive lever (9) can be connected to the hinge bracket (1).

2. (Currently amended) The device as claimed in Claim 1, characterized in that the drive shaft (7) is connected in at least one of a force-fitting ~~and/or~~ and a form-fitting manner to the drive lever (9).

3. (Currently amended) The device as claimed in Claim 1 ~~or 2~~, characterized in that, on its side which is directed away from the drive shaft (7), the drive lever (9) has a bearing bushing (11) which can be plugged on to a bearing journal (12) provided at the end of the hinge pin (3).

4. (Currently amended) The device as claimed in ~~one of Claims 1 to 4~~ Claim 1, characterized in that the drive lever (9) and the hinge bracket (1) can be fastened to one another in a releasable manner.

5. (Currently amended) The device as claimed in ~~one of Claims 1 to 3~~ Claim 1, characterized in that the drive lever (9) can be fastened on a flange part (2) of the hinge bracket (1) which serves, at the same time, for fastening the hinge bracket (1), to the vehicle door or vehicle lid.
